Data Sheet

Description

The 5 volt and 12 volt series lamps contain an integral current limiting resistor in series with the LED. This allows the lamp to be driven from a 5 volt/12 volt source without an external current limiter. The red LEDs are made from GaAsP on a GaAs substrate. The High Efficiency Red and Yellow devices use GaAsP on a GaP substrate.

The green devices use GaP on a GaP substrate. The diffused lamps provide a wide off-axis viewing angle.

The T-1³/₄ lamps are provided with sturdy leads suitable for wire wrap applications. The T-1³/₄ lamps may be front panel mounted by using the HLMP-0103 clip and ring.

Features

- Integral current limiting resistor
- TTL compatible Requires no external current Limiter with 5 volt/12 volt supply
- Cost effective
 Saves space and resistor cost
- Wide viewing angle
- Available in all colors Red, High Efficiency Red, Yellow, and High Performance Green in T-1 and T-13/4 packages

Package Dimensions

			60	12	3681	1.6	-
					3681-B00xx	1.6	-

Note:

1. $\theta_{1/2}$ is the off-axis angle at which the luminous intensity is 1/2 the axial luminous intensity.

Part Numbering System

Absolute Maximum Ratings at $T_A = 25^{\circ}C$

	Red/HER/Yellow 5 Volt Lamps	Red/HER/Yellow 12 Volt Lamps	Green 5 Volt Lamps	Green 12 Volt Lamps
DC Forward Voltage (TA = 25°C)	7.5 Volts ^[2]	15 Volts ^[3]	7.5 Volts ^[2]	15 Volts ^[3]
Reverse Voltage (IR = 100 μA)	5 Volts	5 Volts	5 Volts	5 Volts
Operating Temperature Range	-40°C to 85°C	-40°C to 85°C	-20°C to 85°C	-20°C to 85°C
Storage Temperature Range	-40°C to 100°C	-40°C to 100°C	-40°C to 100°C	-40°C to 100°C

Notes:

2. Derate from $T_A = 50^{\circ}C$ at 0.071 V/°C, see Figure 3.

3. Derate from $T_A = 50^{\circ}$ C at 0.086 V/°C, see Figure 4.

Electrical/Optical Characteristics at $T_A = 25^{\circ}C$

		High Efficiency Red		Yellow			Green					
Symbol	Description	Min.	Тур.	Max.	Min.	Тур.	Max.	Min.	Тур.	Max.	Unit	Test Condition
λ _P	Peak Wavelength		635			583			565		nm	
λ_d	Dominant Wavelength		626			585			569		nm	Note 4
$\Delta\lambda^{1}/_{2}$	Spectral Line Halfwidth		40			36			28		nm	
Rθ _{J-PIN}	Thermal Resistance		290			290			290		°C/W	Junction to Cathode Lead (Note 6)
Rθ _{J-PIN}	Thermal Resistance		210			210			210		°C/W	Junction to Cathode Lead (Note 7)
IF	Forward Current 12 V Devices		13	20		13	20		13	20	mA	$V_F = 12 V$
IF	Forward Current 5 V Devices		10	15		10	15		10	15	mA	$V_F = 5 V$
ηv	Luminous Efficacy		145			500			595		lumen /Watt	Note 2
V _R	Reverse Breakdown Voltage	5.0			5.0			5.0			V	$I_R = 100 \ \mu A$

Notes:

4. The dominant wavelength, λ_d , is derived from the CIE chromaticity diagram and represents the single wavelength which defines the color of the device.

5. Radiant intensity, I_e , in watts/steradian, may be found from the equation $I_e = I_V/\eta_V$, where I_V is the luminous intensity in candelas and η_V is the luminous efficacy in lumens/Watt.

Precautions

Lead Forming

- The leads of an LED lamp may be preformed or cut to length prior to insertion and soldering into PC board.
- If lead forming is required before soldering, care must be taken to avoid any excessive mechanical stress induced to LED package. Otherwise, cut the leads of LED to length after soldering process at room temperature. The solder joint formed will absorb the mechanical stress of the lead cutting from traveling to the LED chip die attach and wirebond.
- It is recommended that tooling made to precisely form and cut the leads to length rather than rely upon hand operation.

Soldering Conditions

- Care must be taken during PCB assembly and soldering process to prevent damage to LED component.
- The closest LED is allowed to solder on board is 1.59 mm below the body (encapsulant epoxy) for those parts without standoff.
- Recommended soldering conditions:

	Wave Soldering	Manual Solder Dipping
Pre-heat Temperature	105°C Max.	-
Pre-heat Time	60 sec Max.	-
Peak Temperature	250°C Max.	260°C Max.
Dwell Time	3 sec Max.	5 sec Max.

Note:s

1. Above conditions refers to measurement with thermocouple mounted at the bottom of PCB.

2. It is recommended to use only bottom preheaters in order to reduce thermal stress experienced by LED.

- Wave soldering parameter must be set and maintained according to recommended temperature and dwell time in the solder wave. Customer is advised to periodically check on the soldering profile to ensure the soldering profile used is always conforming to recommended soldering condition.
- If necessary, use fixture to hold the LED component in proper orientation with respect to the PCB during soldering process.
- Proper handling is imperative to avoid excessive thermal stresses to LED components when heated. Therefore, the soldered PCB must be allowed to cool to room temperature, 25°C, before handling.
- Special attention must be given to board fabrication, solder masking, surface plating and lead holes size and component orientation to assure solderability.
- Recommended PC board plated through hole sizes for LED component leads:

LED Component Lead Size	Diagonal	Plated Through- Hole Diameter
$0.45 \times 0.45 \text{ mm}$ (0.018 × 0.018 in.)	0.636 mm (0.025 in)	0.98 to 1.08 mm (0.039 to 0.043 in)
0.65 mm (0.026 in)	0.919 mm (0.036 in)	_
0.50 × 0.50 mm (0.020 × 0.020 in.)	0.707 mm (0.028 in)	1.05 to 1.15 mm (0.041 to 0.045 in)
0.70 mm (0.028 in)	0.99 mm (0.039 in)	_
	Lead Size 0.45×0.45 mm $(0.018 \times 0.018$ in.) 0.65 mm $(0.026$ in) 0.50×0.50 mm $(0.020 \times 0.020$ in.) 0.70 mm	Lead Size 0.45×0.45 mm (0.018×0.018 in.) 0.636 mm (0.025 in) 0.65 mm (0.026 in) 0.919 mm (0.036 in) 0.50×0.50 mm (0.020×0.020 in.) 0.707 mm (0.028 in) 0.70 mm 0.99 mm

Note: Refer to application note AN1027 for more information on soldering LED components.

Recommended solder: Sn63 (Leaded solder alloy) SAC305 (Lead-free solder alloy)

Flux: Rosin flux

Solder bath temperature: 245 °C \pm 5 °C (maximum peak temperature = 250 °C)

Dwell time: 1.5 sec – 3.0 sec (maximum = 3 sec)

Note: Allow for board to be sufficiently cooled to room temperature before you exert mechanical force.

Figure 9. Recommended wave soldering profile.
